

7" Perfect fit - Proper reception Mast/Aerial

- 7 inch mini mast/aerial designed to fit all Fuba and Fuba based antenna bases.
- Helical windings for the antenna element are utilized for reception, 18+ feet of wire is wound into a 6.5 inch spiral. This allows this antenna mast to be the equivalent of a true 4 foot 9 inch long mast in a 7" package. This is a half octave design tuned for optimal reception of 88 to 108 MHZ. This mast uses 6 more feet of wire than a VW/Fuba mast and 5 more feet than a OEM S2000 mast.
- Fiber reinforced flexible core prevents sagging and whipping around while driving. VW Fuba uses a spring that gets weak over time.
- Chemical, scratch and UV resistant outer casing. Will not dry rot and will not be damaged by car washes.
- Multi-fit high nickel stainless adapters fit 6MM Female, 6MM Male, 5MM Male.

Both the LoCustom mast and the OEM S2000 mast are pictured on a OEM 2007 VW/Fuba R34 Antenna base, this is the standard that all OEM antenna bases use.
